FULL STACK DEVELOPER

Ammar Rizal Rasyidi.

I build web products, maps, and interactive 3D experiences. My work spans **fintech, healthcare, AI, blockchain, music, and conservation**.

Banda Aceh, Indonesia | ammar.r.rasyidi@gmail.com | github.com/ammar-rasyidi

What I build with

Backend

Node.js, NestJS, Express, Laravel, REST APIs, WebSocket, Redis

Frontend

TypeScript, Angular, React, Vue, Next.js, HTML & CSS, MapLibre GL

Data & Infra

MongoDB, MySQL, Linux, Git, PMTiles, CI / cron jobs

Also worked with

AI voice / TTS, GPU inference, Algorand, Smart contracts, DocuSign, Geospatial

Where I've worked

Full Stack Developer
AUG 2021 - APR 2025

Undercurrent Technology · Singapore

- Owned client web apps end to end, from the database and API up to the Next JS front end.
- Designed REST APIs the rest of the team could build on without second-guessing.
- Worked straight with clients to turn rough ideas into features that actually shipped.

Full Stack Developer
JAN 2021 - AUG 2021

Luna Studio · Indonesia

- Built web systems from an empty repo, choosing the architecture and the data model.
- Ran the server side and kept the database sane as the feature list grew.

Junior Web Developer
JAN 2018 - DEC 2020

Diskominsa Provinsi Aceh · Indonesia

- Kept the agency's web systems running and shipped new features on top of them.
- Wrote the REST APIs the front-end screens relied on.

Freelance Web Developer
MAY 2017 - DEC 2018

Independent

- Took client sites from the first conversation to a deployed product, front and back.
- Set up and looked after the servers and databases that kept them online.

Things I've built

Mandum Rimba

Creator & maintainer · 2026 - now

mandumrimba.org · github.com/ammar-rasyidi/mandum-rimba

An independent, non-profit map of Indonesia's forests and wildlife. I built it full stack: a Next.js front end with an interactive MapLibre map and a bilingual interface, a NestJS backend, and a data pipeline that pulls credible satellite and public data and rebuilds the vector tiles on a schedule. I designed it, wrote every layer, and keep it running, and the whole thing is open source under AGPL.

Lam Rimba

Creator & developer · 2026 - now

lam.mandumrimba.org

A browser-based 3D adventure about Indonesia's forests and wildlife. I build the interactive world and gameplay with TypeScript and Three.js, bringing forest exploration, wildlife encounters, and conservation into a playable experience on desktop and mobile.

Suara AI

Creator & Full Stack Developer

suaraai.id

An Indonesian text-to-speech product for content creators, with voice cloning and emotional tone control. I built the backend and the GPU inference pipeline behind the voices, plus local billing through QRIS and e-wallets.

Voicelyf

Creator & Full Stack Developer

A global AI voice studio for creators, English-first with multilingual voices. It does text-to-speech, voice cloning, and per-line emotion control, rendering hours of studio-quality audio. I built the backend and the GPU inference pipeline behind the voices.

Opulous

Full Stack Developer

A blockchain platform where musicians tokenize their rights and fans invest directly. I built the backend services and the smart-contract integration, then connected it all to the front end.

Straits Financial

Full Stack Developer

straitscache.com

An internal platform that moved bond trading onto the Algorand blockchain for faster, cleaner settlement. I built the backend, the trading APIs, and DocuSign-based document signing.

HealthStar

Full Stack Developer

A telemedicine platform for online consultations and patient records. I built the secure backend services and wired the APIs into a React front end.

Jroh Creative

Full Stack Developer

jrohcreative.com

An online marketplace for selling creative digital assets like fonts and mockups, built end to end. I designed and developed the backend APIs, built the responsive storefront that showcased the assets, and managed the Linux server deployment and uptime.
