FULL STACK DEVELOPER

Ammar Rizal Rasyidi.

I build web products, maps, and interactive 3D experiences. My work spans **fintech, healthcare, AI, blockchain, music, and conservation**.

THE STACK I REACH FOR

What I build with

Backend

Node.js · NestJS · Express · Laravel · REST APIs · WebSocket · Redis

Frontend

TypeScript · React · Vue · Next.js · HTML & CSS · MapLibre GL

Data & Infra

MongoDB · MySQL · Linux · Git · PMTiles · CI / cron jobs

Also worked with

AI voice / TTS · GPU inference · Algorand · Smart contracts · DocuSign · Geospatial

CAREER

Where I've worked

AUG 2021 - APR 2025

Full Stack Developer

Undercurrent Technology · Singapore

- Owned client web apps end to end, from the database and API up to the Next JS front end.
- Designed REST APIs the rest of the team could build on without second-guessing.
- Worked straight with clients to turn rough ideas into features that actually shipped.

JAN 2021 - AUG 2021

Full Stack Developer

Luna Studio · Indonesia

- Built web systems from an empty repo, choosing the architecture and the data model.
- Ran the server side and kept the database sane as the feature list grew.

JAN 2018 - DEC 2020

Junior Web Developer

Diskominsa Provinsi Aceh · Indonesia

- Kept the agency's web systems running and shipped new features on top of them.
- Wrote the REST APIs the front-end screens relied on.

MAY 2017 - DEC 2018

Freelance Web Developer

Independent

- Took client sites from the first conversation to a deployed product, front and back.
- Set up and looked after the servers and databases that kept them online.

SELECTED WORK

Things I've built

A handful that show the range, from a blockchain trading platform to a public map I built and still run today.

★ OPEN SOURCE

Mandum Rimba

Creator & maintainer · 2026 - now

An independent, non-profit map of Indonesia's forests and wildlife. I built it full stack: a Next.js front end with an interactive MapLibre map and a bilingual interface, a NestJS backend, and a data pipeline that pulls credible satellite and public data and rebuilds the vector tiles on a schedule. I designed it, wrote every layer, and keep it running, and the whole thing is open source under AGPL.

Google Analytics · Jan to Oct 2026

mandumrimba.org Source on GitHub

Next.js 14 · MapLibre GL · PMTiles · NestJS · MongoDB · Turborepo

★ FEATURED PROJECT

Lam Rimba

Creator & developer · 2026 - now

A browser-based 3D adventure about Indonesia's forests and wildlife. I build the interactive world and gameplay with TypeScript and Three.js, bringing forest exploration, wildlife encounters, and conservation into a playable experience on desktop and mobile.

lam.mandumrimba.org

TypeScript · Three.js · WebGL · Vite · PWA

Suara AI

LIVE

Creator & Full Stack Developer

An Indonesian text-to-speech product for content creators, with voice cloning and emotional tone control. I built the backend and the GPU inference pipeline behind the voices, plus local billing through QRIS and e-wallets.

NestJS · Next.js · Python · Modal (GPU) · MongoDB

Voicelyf

OFFLINE

Creator & Full Stack Developer

A global AI voice studio for creators, English-first with multilingual voices. It does text-to-speech, voice cloning, and per-line emotion control, rendering hours of studio-quality audio. I built the backend and the GPU inference pipeline behind the voices.

NestJS · Next.js · Python · Modal (GPU) · MongoDB

Opulous

OFFLINE

Full Stack Developer

A blockchain platform where musicians tokenize their rights and fans invest directly. I built the backend services and the smart-contract integration, then connected it all to the front end.

NestJS · MongoDB · Next.js · Ethers.js · Redis

Straits Financial

INTERNAL

Full Stack Developer

An internal platform that moved bond trading onto the Algorand blockchain for faster, cleaner settlement. I built the backend, the trading APIs, and DocuSign-based document signing.

TypeScript · Laravel · Algorand · DocuSign

HealthStar

OFFLINE

Full Stack Developer

A telemedicine platform for online consultations and patient records. I built the secure backend services and wired the APIs into a React front end.

NestJS · MongoDB · Next.js · WebSocket

Jroh Creative

LIVE

Full Stack Developer

An online marketplace for selling creative digital assets like fonts and mockups, built end to end. I designed and developed the backend APIs, built the responsive storefront that showcased the assets, and managed the Linux server deployment and uptime.

Laravel · MySQL · jQuery · Linux (CentOS)
